Work experience and skills

Varonis 2020 – Apr 2024

QA Engineer

Design, coordinate and implement testing activities as well as manual and automated tests

Planning and leading extensive testing for a newly integrated platform within the system

Performing testing on a web-based product management system

Position 1: QA Engineer – New Feature integration (1 year)

Performed integration testing for a new feature across multiple platforms, including a newly introduced platform within the system. The feature involved SQL testing, data validation, web testing, extensive work with permissions and Active Directory, in both local and cloud-based labs. Developed a comprehensive test plan, executed manual tests, assisted in automation testing, and ensured the successful integration of the feature into the company's product. Worked in an Agile (Scrum) team, collaborating closely with developers while establishing full documentation for testing processes.

Position 2: QA Engineer – Web Team (2 years)

Conducted extensive functional, web, and analytical testing for the company's Web interface, working closely with multiple departments. Responsible for functionality and display testing of the feature previously tested in the first role. Established and managed local and cloud-based testing labs, setting up extensive testing infrastructures.

Position 3: QA Engineer – Multidisciplinary Testing Team (6 months)

Part of a multidisciplinary testing team under the Web department, focusing on cross-departmental testing projects integrating shared features across various teams. A diverse and dynamic role involving the

establishment of unique testing infrastructures, collaboration with different departments, and adapting testing processes to evolving company needs.

Elbit Systems 2018 - 2020

QA and Product Integration

- Manual QA on a large-scale networking project consisting of servers, clients and RF (radio) products and LTE products (mobile)
- Network testing on all ends of the products, VOIP and ROIP (R=radio)
- Testing in environments OS Linux and Windows and on unique in-house firmware
- Writing STD planning, tests and defects on QC of HP
- Working in Agile software development team, having frequent interactions with developers, program engineers and the project managers

888Holdings 2016 – 2017

Team Leader at the Network Operations Center

- keeping the NOC ready and running 24/7
- Keeping projects on track: planning, scheduling, coordinating with R&D resources.
- Identifying and analyzing trends of players.

Prime Minister's Office 2010 — 2016

Team Leader at the Network Operations Center

- Inception and implementation of new SOPs allowing the team to grow into new technologies.
- Missions: keeping the NOC ready and running 24/7 and running the afterhours helpdesk.
- Running, training and helping to grow a team of up to 12 people. Keeping the team spirited and with a good vibe.
- Keeping projects on track: planning, scheduling, coordinating with R&D resources.
- Side projects on loan to other teams:
 - Analyst at the Big Data team, mission: helping train an indexing and retrieval system (2013)
 - Assisting a Data Clearing team to transfer data between classified networks in complex cases (2012)

Prime Minister's Office 2008 — 2010

Operator at Network Operations Center and System Administrator

- Domain expertise in frontline maintenance and triage of network infrastructure, SAP and CRM systems as well as Oracle and MSSQL databases, on physical and VMWare servers.
- Keeping pace with a stringent SLAs of 1 hour or less for solving system failures.
- Learning by heart all the SOPs as well as physical and logical layouts of a large-scale server farm up to finest details within the first 6 months.

Nestle Nespresso, Cellcom 2007 — 2008

Customer service manager and Sales Representative at a call center and in Nespresso stores.
